

Final project presentations, ASL, Spring 2022

Info for students

Final presentations: Time and General Info

They take place in the **week of June 6**, after semester end (to give a bit more time) and will be scheduled with the advisor (similar to the one-on-one meetings). Each presentation is **only attended by the team and the advisor**.

Presenter gets **drawn randomly** at beginning of presentation.

Each team get a **30 minute slot**. Presentation time: **12 minutes**, rest Q&A.

Presenter should try to answer but can delegate (or others can add to the answer).

The project should essentially be done by presentation time. It is ok if you still want to do the one or other experiment or complete smaller parts. It is not ok, if major parts are future work (e.g., we did not try SIMD yet, plan to do next).

All team members have to attend and be ready to answer questions.

Presentation

Format: Powerpoint or pdf.

Part on explaining the algorithm should be relatively short, focus is on optimizations and analyses (see project system).

Make sure you have good plots including of course performance plots.

Timeline

Monday, June 6, by noon: submit presentation to advisor(s)

Name = project number as follows:

- Correct: 01.pdf, 17.pptx, 23.ppt
- Incorrect: 7.pdf, 07_ntt.pptx, miller.pdf, 14.key

Monday, June 6, by noon: update information in project system (as usual, be very brief)

Q&A

Can more than one person present?

No.

Why is the speaker drawn randomly?

This a team project so after working on it together everybody should be prepared and able to present. Don't stress out if not the optimal speaker is chosen. See grading of project at
